

EDUCATION

3rd Year Engineering Physics

2023-2028

University of British Columbia, Bachelor of Applied Science

TECHNICAL SKILLS

CAD Modeling and Simulation: SolidWorks, FEA (SolidWorks), Topology (SolidWorks), Onshape

Manufacturing: Mill, Lathe, Drill Press, Water Jet, Laser Cutter, 3d Printer, Carbon Fiber Layups

3D Printing: Bambu Lab, ELEGOO Cura, Creator Pro, PLA, ABS

Programming Languages: Python, C++, Java, C, MATLAB

Version Control: GitHub, TortoiseSVN

Certifications: PHAS Machine Shop Certification, PHAS PCB Design Certification

TECHNICAL EXPERIENCE

Mechanical Engineering Coop Student

January - April 2025

Ikomed Technologies Inc, Vancouver BC

- Designed electronic enclosures in SolidWorks to mount PCB's and external connectors
- Ensured enclosures were up RF shielding and isolation standards
- Machined custom mounts, using mills, benders and other machine shop tools
- Drilled holes and milled slots in enclosures following SolidWorks drawings
- Helped built test jigs, run experiments, and record measurements

Chassis Sub team Member

September 2025 - Present

UBC BAJA, University of British Columbia, Vancouver

- Designed and manufactured a full firewall assembly for BAJA offroad car
- Fabricated 25 frame tabs to mount firewall, using waterjet, angle grinders, and pneumatic tools
- Prototyping test pieces with laser cut cardboard, hardboard, and 3d printed parts
- Performed carbon fiber layups and composite fabrication for body panels
- Worked with other sub teams such as suspension and drivetrain to ensure smooth integration

Pet Rescue Robotics Competition

Enph353, University of British Columbia

- Designed a modular robot chassis in Onshape along with the drivetrain system
- Fabricated gears, mounts, and chassis parts out of plastics and hardboard using a laser cutter
- Designed a modular four bar linkage claw pick up pets, with 3d printed parts
- Manufactured sheet metal with water jet cutter, bender, and other hand tools

Machine Design Project, SARA Arm

Mech 325, University of British Columbia

- Contributed to conceptual design and mechanical analysis of a SCARA robot base
- Specified a power transmission system targeting a 15 lb payload and sub-5 s cycle time.
- Performed stress, fatigue, and life-cycle calculations to size shafts, belts, and bearings
- Produced drawings and a bill of materials based off selected components
